BSCC-PPIC Multi-County Study (MCS)

**BOARD OF STATE AND
COMMUNITY CORRECTIONS**

Engagement:

- California State Association of Counties
- County Administrative Officers Association of California
- California State Sheriff's Association
- Chief Probation Officers of California
- CDCR and DOJ

Partially Funded by:

- National Institute of Justice
- California Wellness Foundation
- Russell Sage Foundation

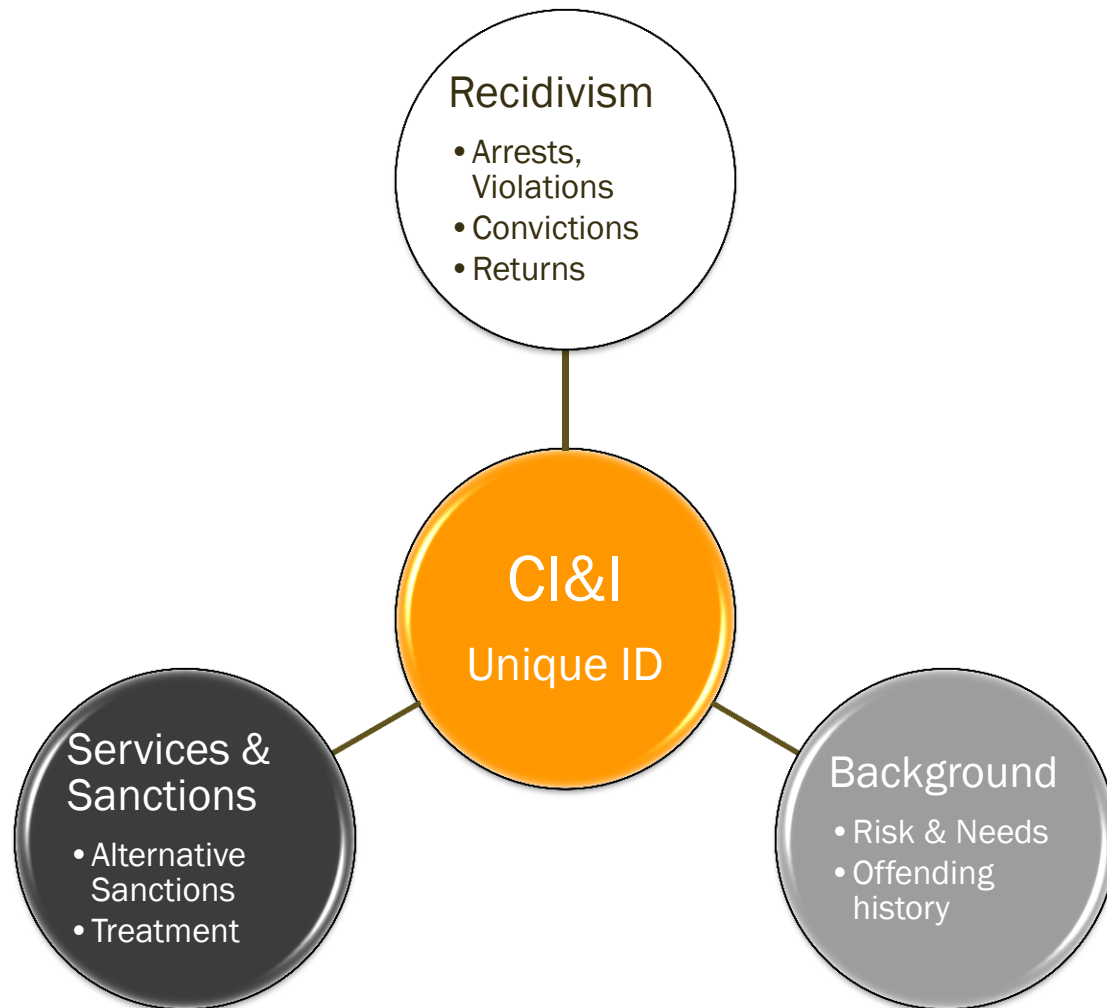

Twelve California Counties

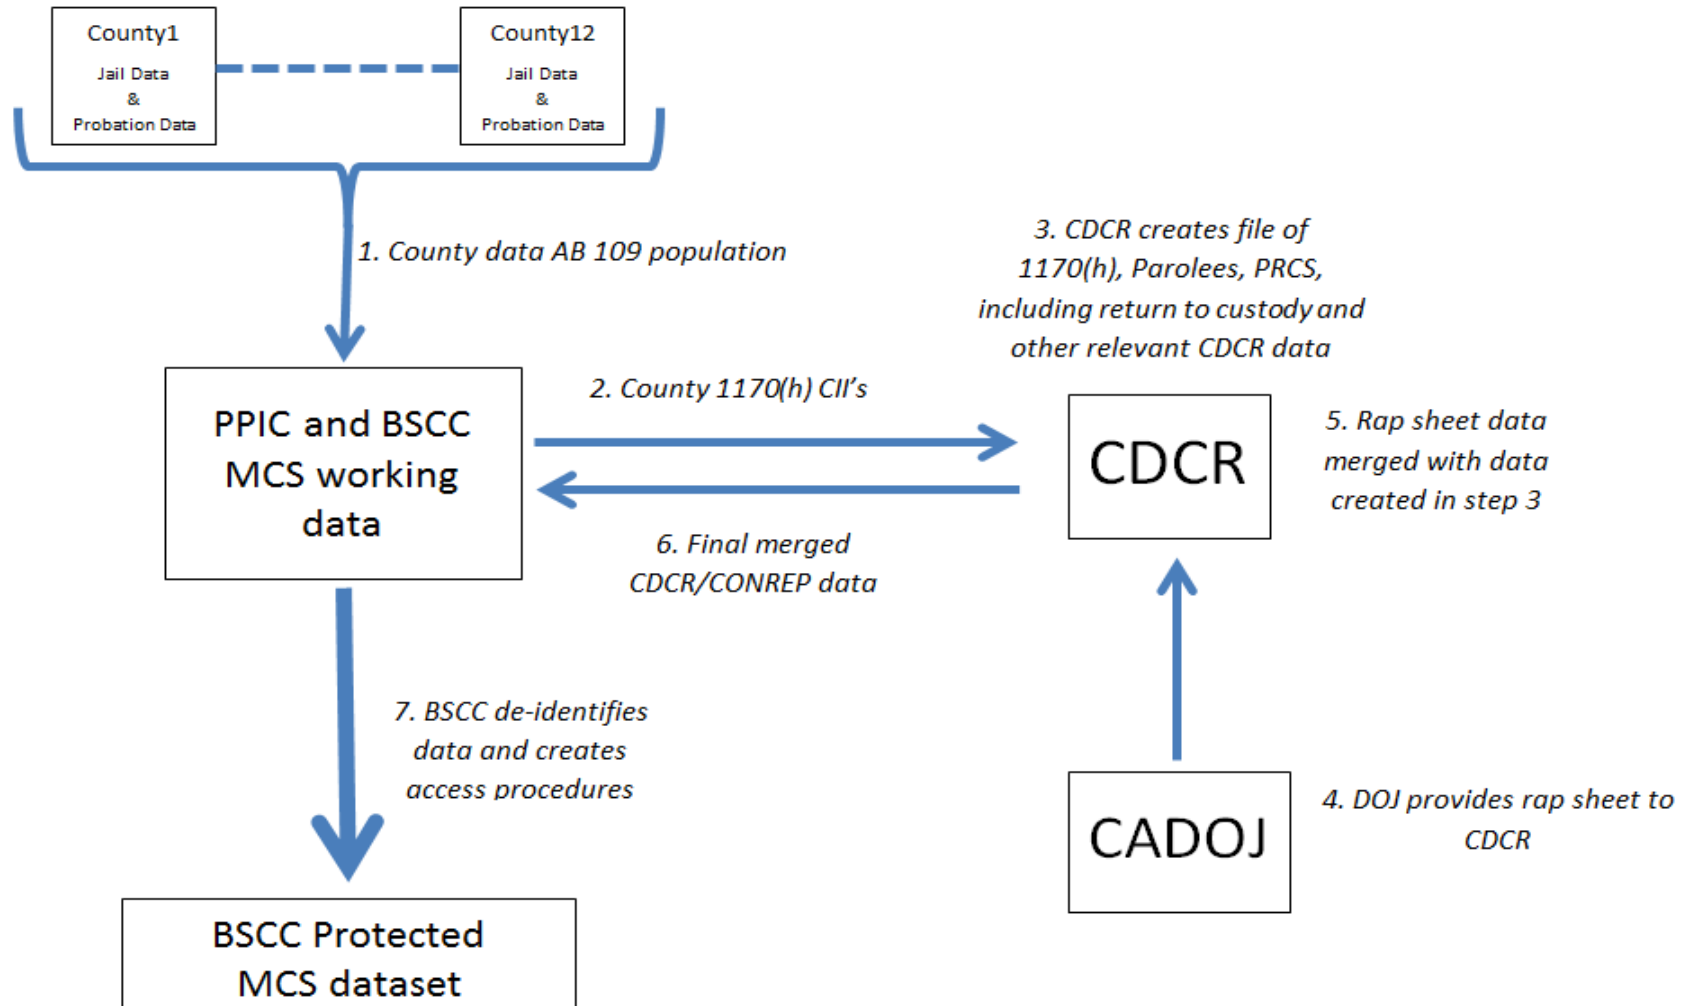

MCS goals

- Compile recidivism statistics for the full realignment population and range of recidivism measures
- Analyze relative effectiveness of different services, programming, sanctioning and other recidivism-reduction strategies
- Assist counties with improvements in data collection and the use of data for continuous self-evaluation

What types of data are needed?

Data providers and the collection process

Key Project Phases

What questions could be answered with such data?

- Are recidivism rates (however best defined) going up or down?
- Do the services we refer people to decrease their recidivism?
- Is flash incarceration leading to behavior change?
- Do offenders given split sentences do better, worse, or the same as offenders given straight sentences?
- Do offenders placed on electronic monitoring do better, worse, or the same as offenders given straight or split sentences?
- Do we have the right set of service and program options in place?
- Are their promising evidence based practices being used elsewhere that could benefit our county?

Next Steps

- Implementing the “Expanding the Scope” Phase
- Awaiting CDCR to complete the link between county data and state recidivism outcomes
- Interim reports on jail populations dynamics, probation populations dynamics, post-recidivism recidivism reports
